

MP6 SETUP SHEET

Steps:

1. Connect Power
2. Connect Speakers into back of MP6
3. Connect Inputs (Mic, MP3, CD Player, etc)
4. Make sure all volume knobs are turned down, then power MP6 on.
5. Turn master volume up (usually 8-9)
6. Turn channel volumes up for inputs

FAQ:

Q: I'm not getting any sound

A: Check connections and make sure power is on. Most commonly, speakers get connected to the front instead of the back.

Q: My mic keeps feeding back

A: Make sure the speakers are not pointed in the direction of the microphone - this will prevent feedback. (Advanced: use on board equalizer to notch out feedback frequencies)
